I. Introduction to VangaNos

VangaNos (VANO) is a revolutionary idea which combines different branches of Economics, Science, Philosophy, History and Politics along with Spiritual ones. The idea targets to bring technological advancements in this new and fast-evolving era. This new, promising cryptocurrency 'VangaNos' will change the way you look at the stock market.

VangaNos is a DeFi tokens crypto, has built on the Binance blockchain. VangaNos trades with the VANO symbol and is issued by a group of scientists. VangaNos believes that science and knowledge could predict every single occurrence of the world.

Today, with the growing threat to the market, VangaNos will be evaluated based on its projects concerning the safety of people's finance.

VangaNos intends to digitalise currency in such a manner that when all the further mentioned projects will be completed, the products could be easily marketable by the cryptocurrency itself and also with real money. VangaNos understands the growing concerns of privacy and safety; thus, endeavour to protect and respect its investors' rights to all possible extents.

II. Objectives of VangaNos

Since environmental degradation and humankind safety are one of the greatest contemporary global issues; VangaNos aims at creating safe and sustainable projects that could resolve issues. The goal is to accomplish these projects without compromising on the environment rather supporting its sustainability.

While the world today faces many challenges related to cryptocurrency, VangaNos brings the solution with trust and the hope for a better tomorrow.

Although artificial intelligence now provides effective solutions to market problems, this new cryptocurrency is designed in such a way that it takes the most out of it. The blockchain is used to unleash the power of VangaNos, the objectives of which we will briefly outline below.

- **To Achieve all the Projects Planned by VangaNos:**

VangaNos has evolved some brilliant ideas on different projects, which are beneficial for both people's safety as well as environment. At VangaNos, sound health and fresh air to breathe are believed to be one's biggest assets. To ignite this idea and develop it to its full potential, an organised project plan has been made. VangaNos has a viable business model that can help it

achieve excellence and not only become a great asset to the investors but also provide unmatched values.

- **Creating a Trustable, Valuable Coin in the Stock Market:**

With the ever-rising trust issues in the stock market, VangaNos aims at imparting the best assets and values. Today, as the public chains are stressed due to the overwhelming competition in the stock market, this cryptocurrency will guarantee you high speed and secured transactions along with total transparency and flexible blockchain management. Where Bitcoin takes over 30 minutes to make one transaction, VangaNos gives you a better investing experience with a more durable blockchain.

III. The Technology Used in VangaNos

VangaNos has planned to work on several most powerful Binance Blockchain technology where blockchain technology refers to the distribution and issuing of some digital assets in the share market rather than transferring or copying the same.

Here, the digital assets are completely decentralised and allow full real-time access to the customers. It makes the entire distribution process more transparent and accessible through the use of cryptographic hashing.

Such technology generates a transparent ledger of changes that warrants and safeguard the integrity of the document and belief in the asset.

This revolutionary technology diminishes the possibilities of fraud and brings transparency in a scalable manner.

IV. Working of the Blockchain Technology

The foundation of any blockchain technology is its blocks, nodes and miners. Let us understand the role of these concepts one by one –

- **Blocks**

Blocks are an integral part of a chain. Each chain contains multiple blocks, which themselves consist of data, nonce and hash.

Nonce is a 32-bit whole number, which generates block header hash, and hash is 256-bit number wedded to a nonce, which must start with a big number consisting zeroes.

A nonce, after the first block of chain is created, generates cryptographic hash. The data is signed and tied to the nonce and hash unless mined.

- **Nodes**

As no organisation can create their own chain, the distributed ledger is connected to the chain via nodes. Nodes refer to any electronic device that can keep the copy of the blockchain. The transparency of the technology prevails here.

- **Miners**

A chain consists of many blocks. The role of creating new blocks on a chain is done through the process called mining. It is done using special software and solving complex math problems to re-create blocks for the chain.

V. VangaNos's Projects

The advanced cryptocurrency, VangaNos, can be evaluated based on four major predictions for the Stock Market, Cryptocurrency price and Politics and natural disaster environments. The four predictions are based on different branches of science. Along with it, VangaNos has planned to launch three new projects as NFT, DEX and Blockchain Gaming.

VangaNos will protect your business assets with our predictions which are based on our analysis data. VangaNos is designed and developed with the utmost professionalism and using the latest technologies. These projects will decide where VangaNos is leading and how successful it will be as valuable as Bitcoin which is used indirectly in the stock market.

Here, VangaNos tries to give you predictions in source code and also it gives you a clear picture of our project ideas, and how viable these are for the business.

Let us look at these projects one by one:

Project: 1

“Stock Market Predictions”

As it was mentioned before by combining all branches of science, we will have a clear idea of how this world will be running by capitalists and governments. For instance, politics and economics have great impact on the market, along with connection between diseases and the profit of capitalists. In light of our analysis, we provide a fresh example. For many years human beings have been suffering from cancer. However, this disease lies on the benefits of capitalists, therefore, the cure of this disease will never be revealed. In contrary, they found (or in other words) they provided the vaccine for Covid-19 because this Virus didn't benefit them.

Our prophecies are based on combining all branches of sciences which we are approaching to the ONE.

$$\lim_{V \rightarrow \infty} \left[\sum_{S=1}^V S \right] = ONE, \text{ where } S \text{ is a branch of sciences}$$

In the following points there are some predictions which are related to the stock market. Also, it includes a great example about Cancer and Covid-19.

Project: 2

“Cryptocurrency Price Predictions”

The future of cryptocurrency will replace real money, in other word, a tangible money will be wiped out for 27 years. And all digital coins will be increasing their values. Nowadays, there are many cryptocurrencies and tokens but a few of them are available in the market. Here are our predictions about the prices of the cryptocurrencies:

Project: 3

- **“Politics Predictions which affect Markets”**

Analysing politics is necessary in today’s world, which is always affecting markets. VangaNos has come up with an idea of a unique connection that links history, religion and society into politics. Then, through analysis, politics can give us a good prediction of the price of the market.

We have many Politics predictions which affect markets in the next four years. Here, are some of the predictions:

- a) hA2HV4GIRCIW/p2E95sL4bBp3mC3Oxa68aaXNe2FFp/Eq/9w3vLXAu2v8id73qw

Project: 4

“Natural Predictions which affect Markets”

Natural disaster has been predicted throughout history by wise men which was based on their knowledge of science. Even animals can predict natural disasters, for instance, rabbits can detect higher frequency sounds, they know when an earthquake will occur, and dogs can detect rain through their effective senses.

We also can predict many natural disasters based on our knowledge, spirituality and analysis of data. These predictions will change the future of the market in those countries. We have twenty-five natural disaster predictions and we will only reveal the following in hash language:

- a) 1BOTKiEabE6LDTFuiyovdImVfwDe5688pwSKHxH6nzHMFNeEjhuWOBPJoggW

Project: 5

“Non-Fungible Token, NFT”

NFT stands for non-fungible token, which is a type of crypto/digital token representing a verifiably unique entity that is mutually interchangeable. In other words, NFTs are non-replaceable digital assets. Every asset is unique and is a tokenized or digitalized version of a real-world or digital asset. They provide the owner a proof of ownership in form of a built-in authentication certificate. Each NFT has a unique digital signature which makes those incommutable. These assets could be artworks, Gifs, tweets, paintings and sketches, photos and video, in-game assets, audio and music, clips, sprot-highlights clips and other types of digital files.

Should you buy them?

Although the first NFT was launched in 2012 on Bitcoin blockchain, presently the most common NFT is built on the Ethereum network. In 2017, the popular NFT were built on a blackchin game, Crypto Kitties, on Ethereum. Since then, the NFT market has boosted and earned unimagivable profits. For instance, the world’s first tweet by twitter’s founder Jack Dorsey said that “just setting up my twitter”, was sold for \$2.9 million. Another example Beeple sold an NFT for \$69 million and Crossroads was sold for \$6.6 million.

VangaNos launch the NFT Project in two ways:

- 1- Each prediction of the major four Predictions which represents in hash code, VangaNos will plan to design each of them with NFT too.
- 2- There is a list of natural phenomena has been pictured by a group of our scientists when they did a research and analysis some subjects on physics, astrology and geology science. Those pictures are genuine and unique, such as they found many pictures and symbols on the Megalith. Or some stone were carving human, animals and symbols. Those pictures are unique and NangaNos is planning to put them in the Market.

VI. Dealing with Finances and Profits

VangaNos tries to provide maximum authenticity by offering you transparency in our financial dealing ways. We must let you know that each project for which we have estimated the profits per annum are calculated based on the profits generated from one prediction.

So, for instance, the profit for the first project estimates that the outcome will be based on crashing and will reset the price of the market to around \$400 billion annum, and the 0.1% profit to VangaNos would be around \$40 Million. People might say this figure of \$40 million of profit is not correct, which is based on 0.1%. Later on, we will reveal a formula that shows that we will gain \$40 million out of 0.1%.

VangaNos has calculated approximate profit of every single projects as following:

S.	Projects	Profit 2022
1	Stock Market Predictions	\$40 million
2	Cryptocurrency Price Predictions	\$65 million
3	Politics Predictions which affect Markets	\$105 million
4	Natural Prediction which affect Markets	\$35 million
5	NFT	\$10 million
6	DEX	N/A
7	Blockchain Gaming	N/A

With all the profit generated by the projects, VangaNos is planning to purchase shares in leading multinational companies.

This would not only increase the value of our cryptocurrency, but would also increase the value of VangaNos indirectly in the share market.

VII. Conclusion

In reference to all the information provided in the whitepaper, herewith we conclude that VangaNos reflects the spirit of integrity and honesty.

We value the trust you place in us and strive to provide the best experience when it comes to investing in cryptocurrency and the stock market.

We believe that with our listed predictions, we will soon achieve the goals and objectives that we have set for our cryptocurrency.
